

Special medical footwear dia with integrated sandwich sole was developed for people with the most sensitive feet - for diabetics.  
the aim of the sandwich sole is to distribute the pressure of the foot on a larger area and prevent the creation of blisters. after 15 years of experience, we extended the advantages of the sandwich sole also on another part of health issues and that is spine ache, hip and knee joint, that become more and more frequent while walking on concrete and asphalt surfaces.  
the aim of footwear with flexi sole is a highest possible flexibility and therefore a protection of disc and joints from shocks and vibrations.

## Health, comfortable and practical long life footwear.

Wearing medical footwear DIA or FLEXI improves the condition of organism and therefore the usage of pills, especially painkillers decreases. Subsequently by degreasing the consumption of pills improves functioning of the stomach and liver.
