# Next-Gen Factory

AI Solutions for the Next Generation of Manufacturing

**VALTA**  
engineering

# What We Do for You

With Next-Gen Factory, we guide you through the entire journey of implementing AI in manufacturing — from initial analysis to the stable operation of intelligent solutions.

Development of a tailored data strategy

Identification of suitable use cases

Design and deployment of initial AI applications

Iterative development and testing

Coaching and support for your teams

Scaling and integration

Monitoring and continuous optimization

# Who Is Our AI Consulting For?

Our AI solutions are designed for companies that face complex processes, large volumes of data, and pressure for efficiency on a daily basis. It's not just traditional manufacturing companies — but also many other key sectors of the economy.

Manufacturing companies  
– Industry 4.0 and 5.0

Logistics centers  
and distribution hubs

Energy providers and power plant operators

Urban and municipal networks

Infrastructure and large facility operators

Service sector companies

# What You Gain

By implementing AI in your production, you don't just gain new technologies – you gain a competitive edge that sets you apart.

**Better insight – smarter decisions**

**Fewer downtimes and predictive maintenance**

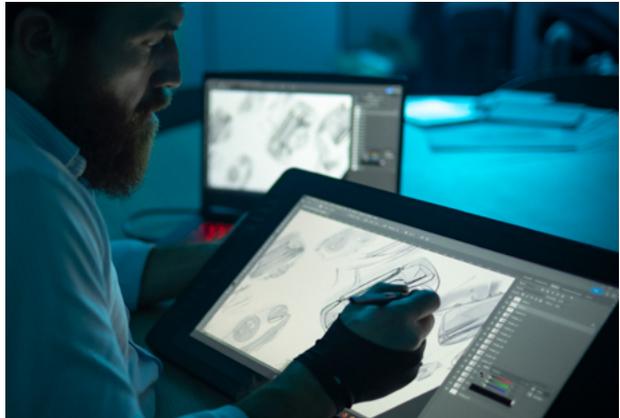

**More efficient processes and resource use**

**Sustainability and CO<sub>2</sub> savings**

**Know-how transfer and team development**

**Scalability and future-readiness**

**A competitive edge through innovation**

# Why Work with Valta Engineering?

Valta Engineering combines practical experience with technological innovation and offers tailor-made solutions in professional partnership with Brillian – a digital solution house (Finland).

**Industry-specific focus**

**Experience and strong background**

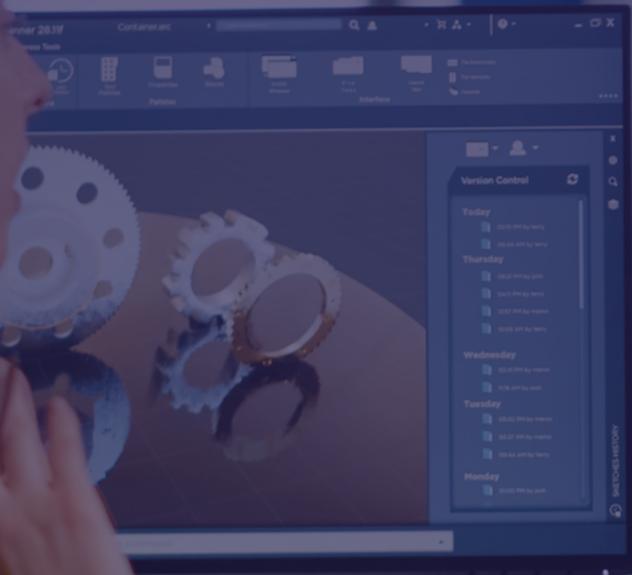

**Practical orientation instead of academic theory**

**Independent and open to modern technologies**

**Strong European network**

**All-in-One Support**
