

# Unattended Ground Sensors

# Anti Drone Systems

# Special Client Systems

**Defenguard Systems s.r.o.** is a reliable supplier and partner in the field of professional security systems and solutions for homeland security and special applications.

All our systems and solutions are designed and configured for a specific purpose to meet the highest quality standards and functional requirements of our clients.

Our skilled and experienced professionals have extensive experience in the design and implementation of special security systems and projects of various sizes and configurations.

The company also offers a variety of customized solutions to meet specific client requirements.

# Unattended Ground Sensors

➤ [www.defenguard.com](http://www.defenguard.com)

Unattended Ground Sensor Systems (UGS) are based on a new generation of fully autonomous seismic detection sensors with advanced detection and classification algorithms trained and optimized using the latest machine learning technologies and algorithms.

For extended functionality, seismic sensors can be complemented with other sensor types and/or monitoring devices or can be easily integrated into third-party security and monitoring systems.

# Anti Drone Systems

[www.defenguard.com](http://www.defenguard.com)

Anti-drone systems (ADS) are available in a variety of configurations ranging from short-range portable systems to long-range mobile or stationary systems consisting of a combination of devices and systems for early detection and countermeasures against all types of Remotely Piloted Aerial Systems (RPAS) / Unmanned Aerial Systems (UAS).

# Special Client Systems

➤ [www.defenguard.com](http://www.defenguard.com)

Special Client Systems (SCS) are designed to perform special operational tasks aimed at detecting and locating target devices and gathering intelligence to ensure public safety and assist in search and rescue operations.
