

Complex solutions
in industrial automation

Design and production of robotic workstations,
production lines and machines

www.ausys.sk

We understand automation

Complex solutions
in industrial automation

Intelligent automation SOLUTIONS FOR

Automotive

E-commerce

Food industry

Plastic industry

Machinery industry

Foundry

Electrotechnical industry

Steel industry

Pick & Place and manipulation

Automation reduces failures and speeds up production processes

Production lines

Complete automated systems that optimize production and reduce costs

Collaborative applications

Collaborative applications enable collaboration within the human-machine interface

Robotic workstations

Robotic processes with high precision and speed

Conveyor and logistics systems

Reduction of time for transportation and storage

Single purpose machines

Single purpose machines, where the process is carried out continuously and is fully automatic

Palletizing

Products manipulation and palletizing

Products manipulation

Products manipulation, palletizing on pallets or into boxes

Assembly and checking stations

Automation for continuous production with high precision and quality
